

AuDaCon AG /New software supports fleet manager

## Transparent cost control

**Day by day fleet managers have to check repair and maintenance invoices for their plausibility. Differing invoice amounts and differing hourly rates make a comparison difficult. Nevertheless it is important that the responsible person can control the cost trend of the company at any time, therefore, AuDaConAUDIT makes a fast and uncomplicated check of after sales and repair invoices possible.**

„With AuDaConAUDIT we have developed a practical solution to calculate and to budget on the one hand repair or a determined service in advance, on the other hand to audit already invoiced services easier“, explains marketing director Ralf Mühlbichler. All procedures and calculations base exclusively on original information and data derived from manufacturers. AuDaConAUDIT was developed especially for fleet managers who conduct the plausibility check with their own employees. In the internet-based online system, the content and the complexity of an accounting operation can be easily understood by the help of easy to use entry and search functions. Because AuDaConAUDIT is an internet-based online platform, the user has access to the current information and data around the clock.

After log in to the system the required vehicle is defined in AuDaConAUDIT and it takes only a few clicks to configure it. All selected vehicles can be saved and, therefore, are available for further checks at any time. Different repair and service works are easily callable without expert knowledge through logical structured search trees. AuDaConAUDIT is organised according to the system structure of the well-known and on the market well-established AuDaConAIS. Via direct entry of the manufacturers work position and spare parts number, the relevant works can fast and without any difficulty be identified and understood.
