

AuDaCon AG / AuDaConTYREDATA is presented for the first time on the Automechanika

Information for a professional tire service

In the past the sizes of tires were identifiable by the vehicle registration certificate. But since the introduction of the vehicle registration certificate part 1 and part 2, workshops cannot identify these specifications in the car documents anymore. Remedy can be found by AuDaConTyredata, a new product of the AuDaCon AG in Weikersheim.

In the tire business the information derived from the vehicle registration certificate gave all necessary information concerning the purchase of tires and rims. In the meantime this necessary data can, however, only found out by difficult and time-consuming data search. "We responded to this problem with our new product AuDaConTYREDATA", explains marketing director Ralf Mühlbichler. All tire data within the system correspond to the official manufacturers guidelines. After the legislator doesn't prescribe this for workshops important information about tire data as part of the vehicle registration certificate anymore, AuDaConTYREDATA was developed, and offers respectively vehicle-based the maximum degree of information content and in addition it convinces through its easy usability and its clear presentation.

AuDaConTYREDATA is a stand-alone online application, which can be accessed via the internet. The results of the respective enquiry can be printed and handed over to the customer for his documentation. Furthermore, the tire data system can be integrated as module in the database-driven information system AuDaConAIS. Consequently, AuDaConTYREDATA is a reasonable enhancement of the well-known AuDaCon data and information system and can be used together with other modules of AuDaConAIS. In this combination the system is available for AuDaConAIS users without restriction of functionality as online as well as offline version. "Our offer to the market for technical information, adjustment, service and repair data is with this new system enhanced by an important function", emphasizes marketing director Ralf Mühlbichler.
