

Software / AuDaCon AG offers Cost Of Ownership-Calculation

Transparent costs of vehicles from the beginning to the end

In order to make a widespread sum-up, analysis and comparison of vehicle's costs, not just the purchase price and the residual value should be taken into consideration but the expenses for each period of the car must be taken into account and without doubt here counts the complete life cycle as well.

The AuDaCon AG offers by AuDaConCOO (Cost of Ownership) the possibility for producers, leasing companies, vehicle fleets, sales and other market participants to incorporate the calculation of all vehicle-oriented expenditure for the time from purchase until the repurchase.

Expenses are generated with the first kilometre on the speedometer and that causes essential influence on the total cost of the vehicle. Apart from the easy cost calculation for fuel, insurance and taxes there are also the charge for service and maintenance. Especially at modern vehicles, which can influence and adjust their service interval electronic, until now was not possible to gain realisable and neutral data concerning the all life cycle of a vehicle. AuDaConCOO makes all of it possible.

The base of the calculations of the Cost Of Ownership is the automotive technical data structure which can be placed at disposal by the AuDaCon AG without any country limitation. The data origin is the widespread data base of the AuDaCon and it is offered in an independent version for the automobile area. All introduced data and information are in accordance with the original requirements of the producers and these are also international available. By means of the software the user can not only have influence on data and information needed for valuation concerning service-interval and labour times for maintenance and service, but it can also value the costs of spare parts, lubricants, tyres, and other numerous factors. With AuDaConCOO he is able to compare the offers of different manufactures and can find the best solution.

AuDaConCOO offers for the users manifold options of application and details. That way there is the possibility to select individual the options of calculation. The valuation of the vehicle is carried out by manually definable calculation steps. There are different modes for calculations, so that the calculation can be occurred automatically or manual and the results are shown as effective or calculative evaluation. It is also possible to integrate own parameter or to adjust all predetermined parameter. The transparent demonstration of the used data is also evident.

The costs may be displayed accumulated and by request also in detailed form. Additional wear out and repair costs may be added into the calculation. In that way the users receive a complex solution from one source and they don't need for COO-calculations and comparisons different service provider.
