

New products, partners and ideas

Demonstrates of its size

At AuDaCon AG everything is geared towards growth. Four years after the company was founded this is demonstrated not only by the continuously increasing number of customers or the now completed new company headquarters in Weikersheim, but also by the data service provider's current trade fair stand at Automechanika. AuDaCon AG will be presenting over 240 m² in Hall 9.1, Booth D 68, new system solutions, useful expansions and cooperation with different partners from all over Europe.

A real sensation will be created here by AuDaConSOS, a new product with which for the first time service information and so-called service actions of manufacturers can be made available to all workshops and dealerships. How this product works and what it contains will be explained in detail at Automechanika. Different new modules of the AuDaConAIS technical database will also be presented during the trade fair.

The Frankfurt Automechanika trade fair is opening its doors on 16 September. As was the case two years ago, AuDaCon AG's company philosophy has this year too provided a vital basis in the design and layout of the stand. Transparency and openness are in this respect two central themes which now manifest themselves in the stand design. Large screens have deliberately not been used. This has created sufficient space for discussions, presentations and contacts. Next to the presentation terminals the AuDaCon Lounge form an integral and central part of the trade-fair stand. This year for the first time exclusive product presentations will be held here at fixed time. Visitors will therefore be able to find out in a relaxed atmosphere from the data specialists from Weikersheim about innovations in the fields of AuDaConEXTRA, AuDaConCOO, AuDaConAIS and AuDaConINSPECT. The presentations will be conducted on the trade-fair days of 16 to 19 September at 10:00 am and 3:00 pm. Also taking part in Frankfurt will be Kromeda and Mivar, two strategic partners of AuDaCon AG from Italy and the Netherlands, who will both be exhibiting their cooperation projects and additional products.

AuDaConINSPECT for trucks

Interesting products await even there representatives of the commercial vehicle sector at AuDaCon AG's stand in Hall 9.1. As well as the AIS version for trucks, the new AuDaConINSPECT, which is now also available for commercial vehicles, will also be exhibited. The new system enables the user to record quickly and easily the current condition of a vehicle. The time and administrative effort required for this purpose is minimised considerably when compared with traditional paper documentation. The software-guided vehicle check dispenses completely with the need to fill out otherwise customary paper forms and then to enter the data in the corresponding EDP systems.
