

AuDaCon AG / AuDaConAIS provides latest data and information with its notice manager

## Access new information immediately

**When vehicle manufacturers provide their authorised dealers with information on changes in work procedures, this information is supplemented with instructions, corresponding and the necessary updates. Now this service is also available to the users of the technical database AuDaConAIS.**

With its newly developed notice manager AuDaCon AG offers the users of AuDaConAIS a possibility to inform garages about revisions in change intervals, torque values, filling quantities or spare parts to be replaced in between updates of AuDaConAIS offline/online. Crucial data and information are available now in the quickest possible way, which again improves the serviceability of the participating garages.

Management of these notices takes place without interfering the application. If current data and information are available, the AuDaConAIS user automatically receives a notification, when he opens AuDaConAIS for the next time. No other steps are necessary. A small yellow triangle next to a vehicle indicates clearly that new data and information are available. The notes are then absorbed automatically into to the regular data structure with the next update.

### Recalls are displayed

The notice manager also considers current manufacturer recalls, which are also indicated specifically with the vehicle. All these additional data and information are crucial factors in keeping garages constantly updated. With this in mind they are able to show competence and generate customer loyalty.

According to AuDaCon's CEO Rolf Wühl, this additional feature of the AuDaConAIS integrates users into our permanent expanding process of the database. "In terms of a our user community we would like to utilise the individual knowledge of one customer for the advantage of all." Creating their own notes and remarks, garages can forward their data and information for particular vehicles with a simple mouse-click directly to AuDaCon. After an initial check by our editorial team, the changes are then released and can be accessed within AuDaConAIS offline/online by all users.
