

AuDaCon AG presents AuDaConCOO now also "On-Demand"

Selective access to transparent vehicle costs

Anyone who wants to comprehensively assess, analyse and compare the costs of a vehicle must take into account not only the purchase price and the residual value, but also the complete lifecycle costs of a vehicle at every stage. With AuDaConCOO "On-Demand", AuDaCon AG offers to vehicle-traders, garages, smaller fleets, car pools as well as leasing companies the capability to incorporate the entire costs of a vehicle into their calculations from the time of its purchase to the moment of its disposal.

With the first recorded miles on the clock, costs are generated which will have a significant influence on the overall consideration of a vehicle's expenses. On top of the regularly emerging costs for fuel, insurance and taxes, the expenditures of service and maintenance must be considered. Particularly with modern vehicles, where service intervals influenced and adapted electronically, it has been virtually impossible to call up usable and independent data over the entire lifecycle of a vehicle. AuDaConCOO now allows to compute these factors for each vehicle reliably and individually. Basis for the COO (Cost-Of-Ownership) calculations are the comprehensive automotive data structures which AuDaCon AG is able to provide cross-national without any restrictions. All data and information utilised within AuDaConCOO correspond with original manufacturer specifications and are available internationally. With the aid of the COO software, data and information about service schedules, labour times for service and maintenance become a crucial part of evaluation. More over it is possible to compare vehicles of different manufacturers.

AuDaConCOO offers a broad variety of options and details, like the possibility to choose individual mileages, to compute in individual steps (step-by-step) with the option of manual or automatic calculation. Results are displayed either as actual or calculative. Furthermore it offers the integration of individual parameters as well as the adaptation of all given parameters. Results are available either cumulative or if required in detail. It is also possible to consider additional maintenance and repair costs.

Access on demand

If not needed permanently, AuDaConCOO is also available as an On-Demand solution. This enables the utilisation of AuDaConCOO on as one-to-one basis for smaller fleets and customers with only a periodic requirement for information.

Soon it will be possible to register and inquire specific Cost-Of-Ownership-information on AuDaCon's homepage.

Processing the inquiry and transmitting the results to the customer will be completed within 24 hours.
