

AuDaCon AG / AuDaConAIS offers a helpful new feature
40,000 interactive wiring-diagram links

For a long time wiring diagrams have been one of the features provided through AuDaCon’s technical database AuDaConAIS. A new module was added making almost 40,000 new schematics links available, for the first time not only informative but also interactive. Once the desired diagram is selected, a variety of meaningful features is making work for the garage so much easier. From now on approx. 5,000 new interactive wiring diagram links are added every quarter. The new data module is available online as well as offline within AuDaConAIS.

The current interactive wiring diagrams contained in AuDaConAIS cover information about ABS, air conditioning and engine management. Zoom in and out via separate buttons is one of the new features. Moving diagrams around on screen is also controlled with extra buttons. These buttons make navigation considerably easier and more convenient. Tracing wires is another special feature of the interactive wiring diagrams. With one mouse click the user highlights a wire connection. This enables him to trace it within the diagram, which will simplify troubleshooting significantly. Now it is easy to identify where a corresponding wire is located and what components it is connecting. Valuable work time is saved by rapid location and elimination of electrical faults. Another useful feature is the ability to highlight the position of an electrical component from the legend with a mouse-click.

According to AuDaCon’s COO Ralf Pelkmann, the approx. 40,000 interactive wiring diagrams links are only a first stage of many more innovative enhancements to the AuDaConAIS database. In the upcoming months the system will be expanded and completed with a large variety of additional data modules. “With the functionality around the wiring diagrams we are able to prove again that next to an excellent data quality, user-friendliness associated with added value for the garages play an important role for us. This will apply for all new modules which we will be presenting during the upcoming months”, explains Ralf Pelkmann. As from now around 5,000 new wiring diagram links will be added every quarter. The order in which increments are made will depend on the pattern of use of our licensees.
